

Infinova V2509 Single-channel Analog to Digital Video Server Preserves Bandwidth

MONMOUTH JUNCTION, NJ – March 18, 2010 – Infinova today announced that it will showcase its V2509-M Series, which efficiently lowers bandwidth concerns, at Expo Seguridad Mexico 2010, April 20-22 in Booth # 1419. The new single-channel video server features MPEG-4 and MJPEG dual encoding and provides users with two independently configurable video streams, one for viewing and the other for recording.

"When companies make the leap from an analog to an IP video surveillance system, a major fear of the IT department is that the new digital solution will use up bandwidth, interfering with the company's present data/information network," explains Mark S. Wilson, Infinova vice president, marketing. "The new V2509 lets our integrators show their customers how they can work with the IT department to alleviate such fears."

The V2509 single-channel video server can be flexibly applied in an intelligent video surveillance system since it provides video-synchronized bi-directional communication and intelligent motion detection. It also provides a web server to easily let the user watch live video.

The new server is compatible with Infinova's V2216 VMS, in which already-installed analog equipment, including cameras, control room, video wall and cabling remain untouched while the V2216 software integrates with the present keyboard, sitting on top of the system to manage the IP equipment using the already-installed analog control system. It is also compatible with other popular video management systems.

With a 90x100mm footprint, the V2509's compact design is an ideal solution for any space-limited application.

The Infinova V2509-M Series single-channel video server is available now. More information is available at www.infinova.com.

About Infinova

By helping integrators provide their customers with best-in-class, large and small video surveillance solutions, Infinova helps integrators generate more business by being able to say "yes" to a broad scope of projects. Infinova provides IP, megapixel and analog surveillance cameras and components, camera accessories, monitors, power supplies and fiber optic communications devices as well as customized solutions. Infinova partners with brand-leader manufacturers to create turnkey solutions and tests and verifies the functionality of their partners' solutions when integrated with Infinova products. Infinova works diligently to ensure integrators can provide affordable solutions and is acknowledged in the industry for their exceptional customer service programs. With such customer focus, Infinova is often called "the integrators' manufacturer."
