

Infinova Brings High Resolution, Full 360 Degree Field-of-View Cameras to “Best of Breed” Program

MONMOUTH JUNCTION, NJ - February 28, 2012 - Infinova today announced that its new Infinova V17XX Series 5- and 10- megapixel cameras use a single multi-megapixel sensor coupled with high resolution optics to display crisp 360 degree images with no blind spots and no moving parts. With the "powered by Sentry360" cameras, users can see, record and playback a full 360 degree field-of-view, ensuring that all activities are recorded anywhere in the scene at all times. As a result, the cameras are perfectly suited for large environments with heavy traffic areas in which they drastically reduce camera counts, labor costs, maintenance and investigative time.

"With traditional cameras, users can only record those images at which the cameras are pointed, zoomed or focused," explains Nathan Needel, Infinova vice president sales, North America. "These 5 and 10 megapixel cameras handle multiple dewarped or corrected perspective angles from their omni-direction vantage points. Six of the V17XX Series can cover the same area as 30 traditional cameras."

The V17XX cameras deliver professional grade H.264 and MJPEG video with superior image quality and performance. Because they feature dual codecs, users can simultaneously output multiple video streams at high resolution. The cameras are fully-featured and include ONVIF open standards protocol, day/night IR models and camera side video motion detection.

"These V17XX Series of 'powered by Sentry360' cameras are another example of how we work to be a consultant and partner with our integrators and their customers," emphasized Needel. "We always want to propose a best in class solution using our products as well as those from other manufacturers with which we have compatibility. There are many cases, such as at an airport, seaport, tollbooth and other applications, where full 360 degree field-of-view cameras with high resolution can fulfill the customer's needs while holding the price down."

The new cameras will be featured in Infinova's booth 5115 at ISC West to be held March 28-30 at the Sands Convention Center in Las Vegas. More information on Infinova video surveillance solutions can be found at www.infinova.com.

About Infinova

With solutions that enable end-users to extend the life of their existing analog equipment by having it co-exist with their new IP video equipment, Infinova provides core equipment for video control rooms, megapixel, IP and analog surveillance cameras, specialized cameras, fiber optic communications products and customized systems. Infinova is acknowledged for its exceptional customer service programs as "the Integrator's Manufacturer."
