

Infinova 2217 VMS Provides Advanced 360-Degree Panomorph Viewing for Growing Businesses

ImmerVision, the inventor of the 360-degree panomorph lens and worldwide expert in immersive optical and imaging technology, announced today that Infinova's 2217 Security Management System version 14.10.02.02 is certified ImmerVision Enables®, the 360-degree video standard.

2217 Security Management is a fully scalable IP VMS which can manage several cameras in one location to thousands over multiple sites. Users can easily integrate certified 360-degree panomorph cameras and mini domes into their security installations while achieving optimum 360-degree coverage, without distortion or blind spots.

"When businesses grow, their solutions need to grow with them as well," said Nitin Amin, Marketing Manager - India, Middle East and Africa at Infinova. "The integration of the 360-degree video standard in the 2217 management system allows our customers to maximize their VMS investment while gaining the best 360-degree coverage."

"As a long-standing VMS leader, Infinova brings value to users with medium to large-scale deployments who are seeking to add 360-degree panomorph cameras or mini domes to their surveillance system," said Joel Schaffer, Manager, Business Development, OEM/ODM – Video Surveillance Applications at ImmerVision.

About ImmerVision

Leading innovation in 360-degree panoramic imaging, ImmerVision licenses its patented panomorph optical and software technology to global lens producers, product manufacturers and software developers. Panomorph lenses are the only ones that can be adapted to any camera, any sensor, and any consumer, commercial and government market. ImmerVision Enables is the recognized standard for 360-degree solutions and applications.
